**SKU:** C4-SN-E-1011

**Categories:** [Sensors](#)

## PRODUCT DESCRIPTION

The LAS 1000 Sniper Optics Detector detects snipers and other forward observers before they fire a shot. While most sniper detection systems are acoustic and help operators respond to a threat after it has already inflicted damage, the LAS 1000 functions on optical principles and can therefore pinpoint the location of a threat before it has a chance to act. This system is ideal for border and perimeter security as well as VIP protection details. **FEATURES:** Detects lenses and reflectors in its line of site even if these objects are covered behind bushes, windows or windshields. Can be handheld or mounted on a tripod. Detection is marked in field of view. Audio signal can also be set to automatically activate upon the detection of a threat. Can reliably detect snipers and other optical equipment in a variety of situations. Detection range of 1000m. User-friendly operation. Rugged design. 8GB Memory storage.
